Mission Statement

CSRgroup's mission is to provide high quality information security services and solutions to our customers.

Capabilities

CSRgroup is a small, veteran owned business that specializes in developing custom computer security training with an emphasis on Computer Network Operations knowledge areas, assisting in the development of Information Operations/ Computer Network Operations tactics, techniques, procedures (TTP) and certifications, specialized software development and penetration testing services.

People

Since it's founding, CSRgroup has successfully produced and delivered several tailored training courses to the Federal Government in the field of Computer Exploitation. Our personnel are subject matter experts in computer network exploitation and attack (CNE), computer network attack (CNA) and Red Teaming with many years of experience inside both the Intelligence Community and the Military.

CSRgroup's expertise is in the areas of CNO, CNE, CNA, training development and instruction, information security, information assurance, penetration testing, and vulnerability assessments. Our exploitation training focuses on the many facets of information technology such as operating systems, server and user level applications, network technologies, wireless networks, authentication systems and emerging technologies. Additionally, our training is designed to focus on those knowledge areas critical to developing a qualified computer network operator. CSRgroup provides analytical training in the areas of open source collection, packet analysis, networks, network mapping and digital network intelligence. Our programmers are experienced in all areas of the software life-cycle from requirements to release, and are proficient in C++, C, Java, and Intel Assembly.
